

RAILWAY STATION PEGGAU

AUSTRIA

In the course of extension of the south railway route, also the train station in Peggau is being extended. Besides divers track relocations, new train platforms with canopies were built. The train platform between the tracks can be reached by the newly built pedestrian tunnel below the main tracks.

On behalf of ÖBB, convex ZT GmbH was responsible for the civil/structural design of the reinforced concrete and steelworks as well as the design for the construction pit retaining walls. A particularity of this project was that the railway operation was not interrupted at any time during construction works. All works for the pedestrian tunnel had to be carried out below a temporary bridge.

Client:
ÖBB (Austrian Federal Railways)

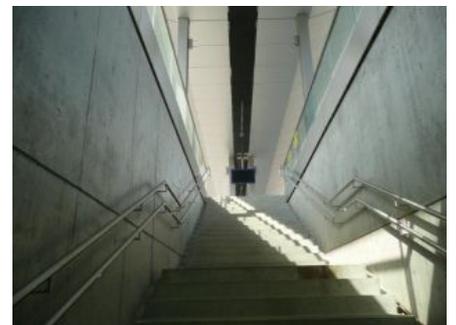

Architecture:
Ostertag Architekten

Scope of works:
roofing of two platforms, tunnel for pedestrians

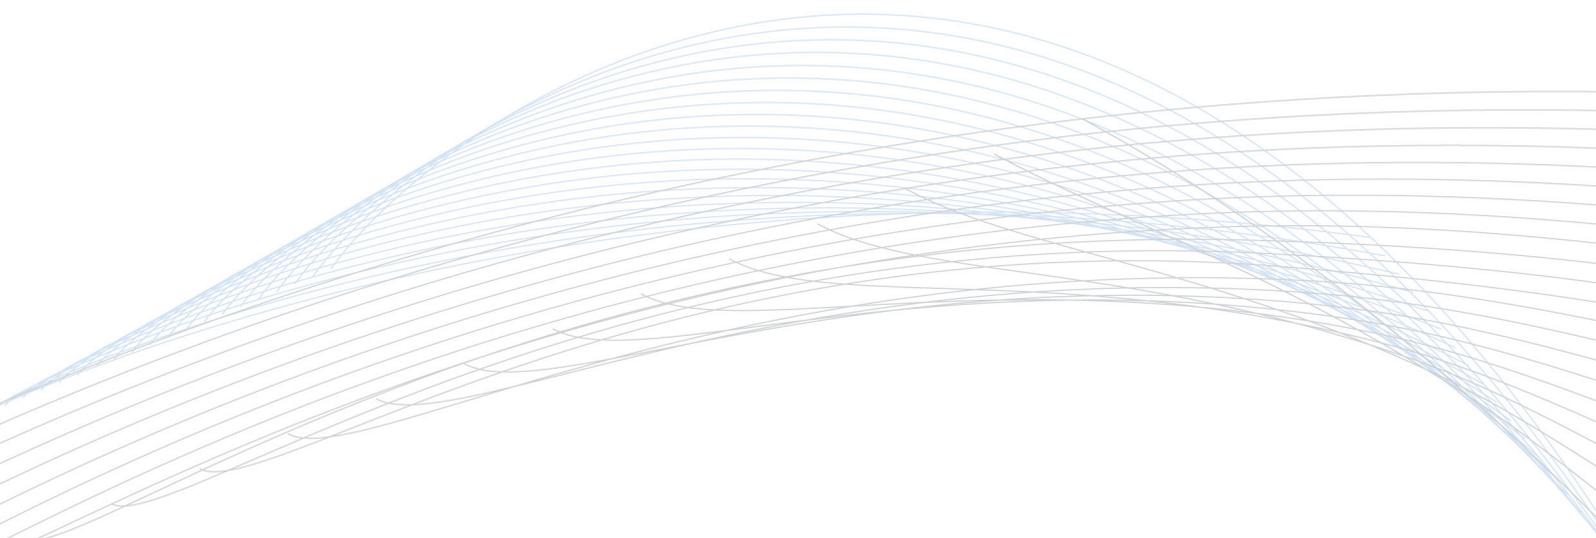

Total costs:
€ 9,7 Mill

Completion:
August 2011
