

FUNPARK, SPA LOIPERSDORF

AUSTRIA

The Spa Loipersdorf in Styria/Austria is extending its attractions with a new funpark with a number of slides that end up in an underground, naturally lighted landing hall. In addition, a new waterpark for children is foreseen. On the 20.11.2011, the new slide- and waterpark was opened.

The structural design of the related construction works is carried out by convex ZT GmbH. The slide- and waterpark are carried out in reinforced concrete. The short construction period and the building in an operation environment was a challenge for all parties involved in the project.
